

Q1: Answer the following questions.

(i) Why are resources distributed unequally over the Earth?

Ans:- The distribution of resources depends upon a number of physical factors like terrain, climate and altitude. Since these factors differ so much over the earth, the distribution of resources is unequal.

(ii) What is resource conservation?

Ans:- Using resources carefully and giving them time to get renewed is called resource conservation.

(iii) Why are human resources important?

Ans:- People can make the best use of nature to create more resources when they have the knowledge, skill and technology to do so. This is why human beings are a special resource. It is the abilities of human beings which help in transferring a substance into a valuable resource. Hence, human resources are important.

(iv) What is sustainable development?

Balancing the need to use resources and also conserving them for the future is called sustainable development. In other words, sustainable development means utilising resources in such a manner that not only the present requirements are met but also the needs of the future generations are taken care of.
